

Sass Architecture

Part 1 – making it run:

- `npm i node-sass`

Part 2 – Create the following folder structure of the Sass:

Part 3 – Make in work

- In your `_variables.scss` create the variables for your color palette
- Import the `_variables.scss` in your `global.scss` and use them
- Remember to import the `global.scss` in your `main.js`

Part 4 – Make it good

- Take all your scoped styling and move it to the correct scss file
